Hi Robert,
Can you help me understand more about the server below so I can open an appropriate Incident in JIRA? Is this some sort of replication between a system in Sophia and another system in NPB or is this a single system in one site or the other? Is this a physical system and if so, can we P2V it so we can expand storage? There is very little available storage in Sophia for P2V. The local disk has most space at 246 GB but we can use that if necessary (temporarily). Hopefully this system in in NPB and we can P2V ourselves out of storage prison.

Thoughts?

PS: I know you are dealing with Long Beach issues so handle those first….we can talk about this after.

```
All the listed projects are core projects for Sophia that cannot be
removed. "moyekj" account owns most new files because svn updates are
run on a cron job to update work areas using that account. So please
find a way to increase disk space for that volume as it is expected to
continue growing.

Thanks,
-Kevin

Hi Kevin,

We have received the file system alert for ec-prj2 Sophia ns120 and NPB ns480 Celerra file System. Currently it's consuming 83% of space. Most of the files are accessed under moncaya and moyekj's recently.

Please find the list of directories which are consuming more than 5GB below and find the attached notepad. Also, Could you please let us know if you can help us to clear some space in it?

Filesystem   Size Used Avail Use% Mounted on
ns120dm1:/ec-prj2/   461G 382G 79G 83% /ec-prj2-testdir
